RESEARCH INTERESTS

In my research, I am exploring the nature of visual representations underlying mid-level vision by trying to characterize the tuning and spatial topographies of proto-object representations, and the kinds of mechanisms that lead to these representations. To this end, I combine computational models of vision, behavioral psychophysics, and neuroimaging data to gain deeper insights into the emergent neural and behavioral signatures of a hierarchical visual processor.

EDUCATION

Harvard University, Cambridge, MA *2021 - Present*
Ph.D. Program in Psychology (Cognition, Brain, and Behavior)
Advisor: Dr. George Alvarez and Dr. Talia Konkle

SRM Institute of Science and Technology, Chennai, India *2014 - 2018*
B.Tech in Computer Science and Engineering (GPA: 8.65/10.0)

RESEARCH EXPERIENCE

Harvard University, Dept. of Psychology *Nov 2018 - Dec 2020*
Research Assistant (Fellow), Vision Sciences Lab
Faculty Advisor: Dr. George Alvarez
Focus: Worked on models and behavioral psychophysics experiments that account for human judgements in intuitive physics tasks and capacity-limits in human visual working memory.

Harvard Medical School (BWH) *Jan 2018 - July 2018*
Research Intern, Shafiee Lab
Faculty Advisor: Dr. Hadi Shafiee
Focus:
Trained convolutional neural networks to identify and qualitatively analyze the structural morphology of cells. Optimized the models to deal with class imbalance using class-sensitive training and sampling.

IIIT-Delhi, Dept. of Computer Science *June 2017 - Aug 2017*
Summer Research Intern
Faculty Advisor: Dr. Saket Anand
Focus:
Lane detection on urban roads using semantic segmentation in autonomous vehicles.

UW-Madison *Sept 2016 - Dec 2016*
Visiting student
Faculty Advisor: Dr. Dane Morgan
Focus:
Used bayesian models and neural networks to predict changes in the mechanical properties of steel components due to alloy configurations.

INVITED TALKS

- Blitz Psychology Talk, Harvard University *2022*
- International week, Pontificia Universidad Catolica del Peru (PUCP) *2022*
- Program in Neuroscience, Harvard University *2023*

HONORS AND AWARDS

- Fellowship for Students from India *2021-2022*
  Awarded in honor of Prof. Amartya Sen

- Reimagine Education Award (Silver), Student-led Innovation for Next Tech Lab *2018*
  Quacquarelli Symonds (QS), Wharton School, University of Pennsylvania
- Best Outgoing Student, Class of 2018 *2018*
  Department of Computer Science, SRM Institute of Science and Technology
- National Champion *2017*
  Smart India Hackathon (India's biggest Hackathon)

TECHNICAL STRENGTHS

Programming: Python (Pytorch, Tensorflow, Theano, Keras), Javascript, Matlab, C, C++, C#, Java
Experimental Techniques: Computational Modelling, Behavioral Psychophysics
Statistics/Analysis: Non-parametric statistics, power analyses, simulation, resampling (bootstrapping), model comparison; factor analysis/principal component analysis, singular value decomposition

LEADERSHIP & ADVISING EXPERIENCE

Mind Brain Behavior Steering Committee

Next Tech Lab, Founding Member and Advisor
Co-founded a student-run research lab at SRM Institute of Science and Technology. Co-led over 160 students concentrating on Artificial Intelligence, Machine Learning, Computational Biology, and Mixed Reality(AR/VR).

SELECT PERSONAL PROJECTS

- **Feature-based categorical attention:** Taking inspiration from work by Lindsay & Miller (2018), I isolated category-specific neurons in a pre-trained (on ImageNet) deep net (VGG-19). Category-wise normalized activation profiles were computed at the resolution of individual neurons and compared with the corresponding normalized gradient-based profiles/curves. Those neurons whose tuning and gradient profiles correlated significantly (hence had behavioral outcomes) were selected. Further analysis (t-tests) provided a stronger selection criterion. During the forward pass, these neurons are then modulated to improve categorization. An open question is to disentangle the attentional signals carried in feedforward, lateral, and top-down connections.
- **Exploring the latent feature space of face representations in a reconstruction-based network using Deep Feature Consistency:** Trained an adversarial variational autoencoder on the CelebA dataset. The KL divergence loss was replaced with an adversarial loss (Makhzani et al., 2016) and the pixel-wise loss was replaced with a deep feature consistent loss (Hou et al., 2016). Smooth interpolations in this latent space showed that the model was able to capture certain semantic aspects of different facial attributes.
- **Neural Artistic Style Transfer for Videos:** Produced results on a frame-by-frame basis and later improved it by initializing every new frame using optical flow from the previous frames.
- **Deep Sense:** A Restricted Boltzmann Machine (RBM) trained on a bunch of different songs by Hans Zimmer to produce novel monophonic music in his style.
